INCIDENT FACTS

Incident Start Date: 7/13/2021		Incident Start Time: 5:15 p.m.	
Incident Type: Vegetation		Cause: Under Investigation	
Incident Location: Feather River Canyon near Cresta Powerhouse			
CAL FIRE Unit: Butte, Lassen-Modoc, Tehama			
Unified Command Agencies: CAL FIRE, United States Forest Service, National Park Service			
Size: 735,064 acres	Containment: 45%	Expected Full Containment: TBD	
First Responder Fatalities: 0		First Responder Injuries: 3	
Civilian Fatalities: 0		Civilian Injuries: 0	
Structures Threatened: 11,813	Single Residences Destroyed: 682		Single Residences Damaged: 52
	Multiple Residences Destroyed: 8		Multiple Residences Damaged: 4
	Non-residential Commercial Destroyed: 139		Non-residential Commercial Damaged: 10
	Other Minor Structures Destroyed: 436		Other Minor Structures Damaged: 26
Total Destroyed: 1,273	Mixed Commercial/Residential Destroyed: 8		Mixed Commercial/Residential Damaged: 0
Total Damaged: 92			

CURRENT SITUATION

Current Situation

Dixie Fire West Zone: Winds continued throughout the night keeping the fire active. Humidity levels did rise in areas of the fire reducing spotting except along the mid slopes where poor recoveries in the thermal belts were experienced. Smoke settled over the fire in the early morning hours, however, moderating fire activity. SW winds are again forecasted with temperatures in the 80s.

Certain evacuation orders have been reduced to warnings and certain warnings have been lifted allowing some residents to return to their homes and businesses. Returning residents are strongly encouraged to stay vigilant with regard to current fire conditions. Residents may see smoke coming from trees and stumps for days following their return. Residents are encouraged to call 911 if they are concerned about any active flames near their homes or businesses rather than attempting to deal with such flames themselves.

Northern California has experienced large fire activity and will likely experience an extended fire season. Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. The prioritization of resources is always

	<p>based on life, property, and natural resources. Under these drought conditions, wildfires are burning rapidly with extreme severity and have traveled up to 8 miles in a single day. Fuel conditions are much worse than previous years and along with wind is causing much greater fire spread. Firefighters are experiencing conditions never seen before, such as increased spread rates, spotting and active nighttime burning. We coordinate very closely with the US Forest Service and CalOES for our local and out of state partners, to ensure resource availability.</p> <p>Dixie Fire East Zone: On the east end of the fire there was a small slop-over between the road and Antelope Lake that firefighters were able to catch and line. Between Antelope Lake and Genesee Valley the fire continues to back down the slope towards the road. Yesterday dozers and crews worked at trying to stop southward progression by the Walker slop-over and were supported by aviation assets, they will continue line construction east today. Late in the day the Grizzly fire produced two spot fires to the east between the Walker slop-over and the Grizzly spot and these were visible from Quincy. Overnight they grew together and are estimated to be around 500 acres in size and are connected to the the main spot. Today crews and aircraft will continue to work at in keeping the Grizzly spot from moving south and heavy machinery will work on indirect control lines down Grizzly Ridge. An extensive plumbing operation was carried out in Taylorsville and hose lines and water have now been run to every house in the community. In Peters Creek work continued to improve and strengthen lines and mop-up. Structure preparation continues in the Five Bears and Ward Creek area. Firefighters continued to conduct heavy mop-up activity in the Dyer Mountain area to secure the line.</p>
